

So, how can we stop the earth
frying us?

Well this is the simple part. If you
want to stop global warming or
climate change, you could cut
down on your pollution, maybe
use the dishwasher & washing
machine less, or you could
use public transport more. This is
how you could save the
world.

making the earth warmer. Cars, factories, and electrical devices cause this as they cause smoke. Trees prevent this by breathing absorbing in CO_2 , but due to them being cut down, a lot more CO_2 is in the world. If the earth gets warmer, polar ice caps could melt, animals could go extinct, which could ruin the food chain.

Take a look at this simplified diagram.
