

A fruit is often sweeter than a vegetable - even if it tastes sour.

And- fruits are **perennials**: they grow in our gardens year after year on **trees** or on **bushes**.

Vegetables often grow for one year only, they are **annuals**. They "die" in autumn and the next year we have to sow or plant them again.

Think- an apple. An apple tree can be 30 years old. Year by year it gives us loads of new apples.

And now think- a tomato. Every year we have to get new tomato plants for our gardens or grow them from seeds.

Circle the correct answer:		
Is a tomato a vegetable?	Уes, it is.	No, it isn't.
Is a banana a vegetable?	Уes, it is.	No, it isn't.
Is a cucumber a fruit?	Уes, it is.	No, it isn't.
Is a carrot a fruit?	Уes, it is.	No, it isn't.
Is a blackberry a fruit?	Уes, it is.	No, it isn't
Is a red pepper a vegetable?	Уes, it is.	No, it isn't.
