

CARBON

SCIENCE

# WHAT IS CARBON?

---

Everything is based on carbon, carbon is a sixth element in the Periodic table. People most see it as the letter "C". Carbon has been known for thousands of years.

# WHERE CAN CARBON BE FOUND?

---

Carbon is in living things, it can be in plants, animals, our planet, and even in ourselves. Carbon makes up our body's systems, organs, cells, and organelles. When you breathe in air you actually breathe Carbon dioxide (CO<sub>2</sub>).

# WHAT IS CARBON USED FOR?

---

Carbon is usually in our everyday life like in the air, water, etc.

Carbon could be handy for anything since all around us that are living.
