

# How bicycles have changed over time.

By Rory Erin Baird

## Hobby horse

€The first bike was called a hobby horse.there are rubber wheels surrounding the bike.

€The hobby horse was mad about 101 years ago.

## High wheeler

This bike is called a high wheeler or a penny-farthing

A high wheeler or penny farthing was invented in 1870. The name came from 2 old British coins.

The pedals of a high wheeler was Playst on the big front wheel.and it was difficult to get off the bike.

## Mountain bikes

A mountain bike is mostly used for riding over some rough/muddy or hilly ground we still use mountain bikes. But we mostly just use them to go on well any type of ground.

## Where are bikes used

In China Millions of people travel from work on their bikes not many people take cars and have cars. some types of bikes can travel on bumpy roads. people use those bikes to get on the countryside or up some hills or mountains .

## Bicycles now

The bikes we use today have pedals and we use them to get to school and home we use bikes for everything. We use bikes to get some exercise and we stills use it to get to werk.and to get home from werk. But instead of haveing woodin ones we have metal ones.

We don't have to push against the ground we use the peddles and we put stickers on the bike and I don't think that they had stickers in the oldie days .we also paint on are bicycles we have different kinds of designs

But they still have different types of designs and different sizes. Bicycles are a big part of our life. Bikes are a type of transportation. Transportation is a moving vehicle that can take you to different places.

As you can see these bikes are not the same in the old days in the old days they had a big wheel in the front and the rider had to push agents the ground gust to make it move.and we have flags and stickers and lots and lots of things like that . And as you herd the bikes are not the same anymore the y don't look the same anymore.
