

How Plants Grow

This is a diagram of how plants grow. I learned how plants grow and I'm happy about that because now I know how plants grow and I'm sure I'm going to need it in I'll grow up. I'm proud of it because I drew it, labeled it and it was my favorite subject, math. My goals while doing this were to make it look pretty and clear. My goals for next time are, to draw the mixing of CO₂, sunlight, and water to make glucose. I think I could have made it better if I had more time and knowledge.
