

A photograph of Elon Musk sitting on a blue couch, laughing heartily. He is wearing a black blazer over a plaid shirt. The background is a white wall with the text "O'REILLY" in large, dark letters. The name "Elon Musk" is overlaid in white text across the center of his face.

Elon Musk

What is exploration

Exploration is when someone goes somewhere in an unfamiliar area to research something, discover something new or just for fun. There are many types of exploration for example Historical. There Are also perspectives for example a perspective to make someone to do something and the other one is to stop someone to do something. There are also changes. There are negative and positive changes. For example, for the Elon Musk exploration the positive change might be that if planet Earth gets destroyed about a million people can go to mars, but a negative change might be that most of our resources on Earth will go to mars and there will not be enough resources on Earth.

Changes

Negative and positive

There can be many changes, there can be negative changes and positive changes. Some positive changes might be that a country might get more land to live on but a negative change might be that more than half the people die on the land that got conquered. There are changes to the environment and also changes to the society.

The changes of the environment are

Positive:

If planet Earth gets destroyed 1 million people will go to Mars.

Negative:

If we put most of the resources on Mars there will not be enough on Earth

Some changes to the society are:

Positive:

Almost everyone can become someone that goes into space.

Negative:

A negative change might be that many people might get sick from the landing and so no one will want to go there anymore and

Perspectives

There can be many perspectives. There is a perspective that agrees and one that disagrees with the exploration.

The perspective which agrees with Elon Musk:

Elon Musk says that if we send 1 million people on Mars there will be less on earth.

The perspective which disagrees with Elon Musk:

Some space agents say that if we send oxygen and resources on mars there will be not enough on earth and also we have enough problems on Earth.

Motives

Motives are reasons explorers explore. There can be many reasons to explore. They can be forced, they might do it because they were inspired from something or they might just do it for fun. Some examples of motives are

His Motive was to bring 1 million people to Mars to live there instead of having so much population on earth.
